Why Reinvent the Wheel?

Jack-of-all-trades products often cripple productivity with complicated features and add-ons. Conversely, RealLegal masters transcript and exhibit management and allows you to seamlessly integrate with other best of breed litigation support and trial presentation technologies. This a la carte approach ensures you get everything you need, and nothing you don't.

Write once and use it over and over and over. Leverage these integration points so you don't waste time reinventing the wheel as you progress through a case.

CaseMap from CaseSoft.

The RealLegal Binder integration with CaseMap enables users to fully leverage the power of chronology in case preparation. The chronology assigned to Binder annotations is preserved when the annotation is exported to CaseMap. In addition, the Facts tab in CaseMap is automatically populated with the cited text, comments, issue code, source and location, as well as an active hyperlink to the complete transcript stored in Binder. **How it's done** >> With both Binder and CaseMap open, simply click All Annotations from the Binder Project Tree. Right-click a transcript annotation from the Details Pane and select "Send to CaseMap". Users can also select a group of transcript annotations for a batch export to CaseMap.

TrialDirector Suite from InData.

RealLegal Binder users can export their transcript annotations and attachments to the DepositionDirector and DocumentDirector modules of TrialDirector. Users can also watch video depositions and the synched transcript simultaneously. **How it's done** >> Select All Annotations from the Binder Project Tree. From the Details Pane, right-click a transcript annotation, select Create TrialDirector Exhibit from Annotation, and follow the wizard. To send an attachment to DocumentDirector, click All Annotations from the Binder Project Tree and select a transcript annotation that has an attachment from the Details Pane. Right-click it and Send Attachment to TrialDirector Suite. To watch a synched transcript and video, import a synched transcript from DepositionDirector into Binder. Play the video within DepositionDirector. Both programs remain open and operate in sync. The Binder user may annotate and issue code while the video plays.

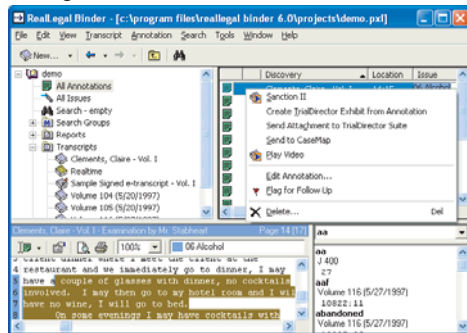

Sanction II from Verdict Systems.

RealLegal Binder and Sanction II users can share video synched transcripts and their annotations. **How it's done** >> Open the RealLegal Binder Conversion Utility from Tools | Launch on the main Binder menu bar. Follow the wizard to properly import a Sanction II project (*.mdb) into a Binder project. Binder users can then search, annotate and summarize the synched transcript. The annotations for the synched transcript can be sent back to Sanction II for trial presentation by right-clicking to the left of the annotation and following the wizard.

RealLegal Binder: The Ultimate Discovery Management Software.

Sending an annotation from Binder to Sanction.

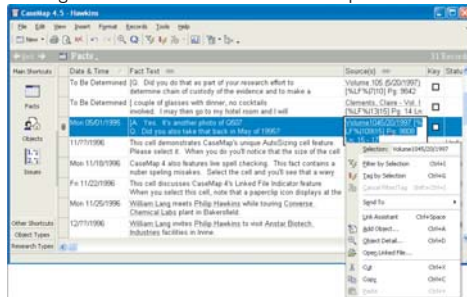

JFS Litigator's Notebook from Bowne.

After annotating, issue coding and summarizing transcripts in RealLegal Binder, users can export single or multiple annotation reports to specific "binders" in a JFS Litigator's Notebook project. The volume name, deponent, date, transcript title, highlighted transcript text, author, and any attachments from Binder are preserved in JFS. An active link to the full transcript is also included. **How it's done** >> Select File | Send To | Annotations | JFS Notebook from the main Binder menu bar. Alternatively, click the Send Annotation to Plugin button on the Edit Annotation dialog box.

YesLaw from YesVideo.

The contents of a YesLaw compact disk can be easily imported into RealLegal Binder. The synchronized video will play in the RealLegal Video Player beside the corresponding transcript. Binder can annotate, search and create hyperlinks in the transcript while watching the video. **How it's done** >> Access the Binder Conversion Utility from Tools | Launch. Navigate to the folder where the *.mdb file is stored on the YesLaw CD. Follow the wizard. Select File | Open from the Binder menu bar to add the synched transcript to the Binder project.

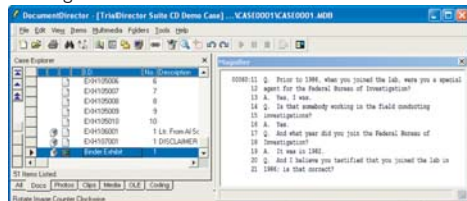

Viewing a Binder annotation within CaseMap.

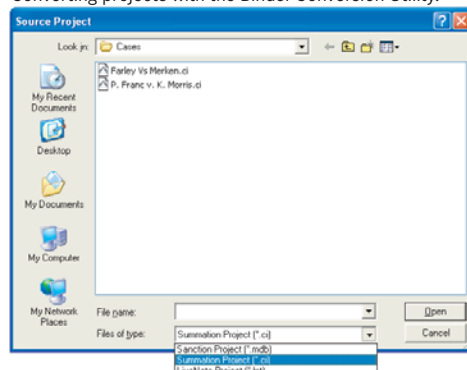

Timaro Technologies.

RealLegal Binder imports video synched transcripts provided by Timaro. **How it's done** >> Use the RealLegal PTS Converter Wizard to make a .XML file from the Timaro PTS file. Then, simply add the .XML transcript to a RealLegal Binder project.

Viewing a Binder annotation within TrialDirector.

Converting projects with the Binder Conversion Utility.

Convert Projects from Other Transcript Management Products

LiveNote Projects.

Transfer the transcripts, issues, and annotations (with comments and chronology) from a LiveNote project to a RealLegal Binder project. **How it's done** >> Access the Binder Conversion Utility from Tools | Launch. Navigate to the folder where the LiveNote case is stored. Follow the wizard. Select File | Open from the Binder menu bar.

Summation Projects.

Projects from Summation Blaze 2.0 and newer can be converted for use in RealLegal Binder. The transcripts, issue codes, and annotations (with comments and chronology) transfer. **How it's done** >> Access the Binder Conversion Utility from Tools | Launch. Navigate to the folder where the Summation case is stored. Follow the wizard. Select File | Open from the Binder menu bar.
